

Automated Equipment Tracking

The Complete Software Solution For The Rental Industry

Automated Rental Management Equipment Tracking

Tracking the details of each piece of serialized equipment your company owns is vital to ensuring your investments keep performing. Equipment must remain well-maintained with regular servicing and occasional overhauls. Without a reliable system of scheduling and recording the details of each piece of equipment and its service history, the profitable life span of your equipment may be shortened.

The ARM Equipment Maintenance module provides a method of tracking vital details about each piece of serialized equipment your company owns. A large amount of data about each individual item

can be tracked by ARM: date purchased, price paid, accumulated revenue and costs, model number, weight, license number, manufacturer, and much more.

With the ability to create entirely new panels and add user definable fields, you can tailor the ARM Equipment Maintenance module to record and track precisely the data required for each of your valuable pieces of equipment. Using the optional KnowledgeSync business alerts module, you are able to configure customized alerts to send and email notification to you and your staff about upcoming service-re-

lated activities, such as a required oil change by a certain date, or lubrication when 250 engine hours have been reached.

Equipment Maintenance is equally valuable for non-serialized inventory. Statistics gathered for this type of equipment include: date last purchased, rented, and sold; year-to-date, prior-year, and cumulative revenue and cost; and the number of times rented and serviced. Equipment Maintenance takes the guesswork out of tracking the lifecycle of your company's valuable equipment.

Cost Code/Type	Period-To-Date	Year-To-Date	Job-To-Date	Description
100-000-000-L	375.00	375.00	375.00	Labor
200-000-000-M	9.43	9.43	9.43	Parts
300-000-000-S	540.95	540.95	540.95	Subcontract
998-999-999-E	1,045.00	1,045.00	1,045.00	Depreciation
999-999-999-E	3,000.00	3,000.00	3,000.00	Acquisition Cost

Total Costs	4,970.38	4,970.38	4,970.38
Less Total Revenues	421.80	421.80	421.80
Equipment Value	4,548.58	4,548.58	4,548.58

Times Rented	
Y-T-D	6
Cumulative	6

How The Features Of The Automated Rental Management Software System Can Benefit Your Company

Track Vital Statistics	ARM Equipment Maintenance tracks a number of vital statistics concerning your equipment, such as: date purchased, purchase price, in service date, last service date, last rental date, disposition date, model number, id number, vendor, height, weight, width, license expiration date, capacity weight, and inspection expiration date.
Rental History Statistics	ARM tracks the following rental statistics: accumulative rental, service costs, profit net of service, times rented, and times serviced for the current year, prior year, and life-to-date.
Status Inquiry	View Rental, Sale, and Historical data for each serialized item. Drill down to the contract or invoice to view complete details of the transaction.
Serialized Item Memos	Enter and maintain nearly unlimited freeform text about an individual piece of equipment. Keep details on servicing or to describe scratches or dents existing before a rental.
Mechanized Items	For mechanized equipment, ARM can track the starting and current meter/odometer reading, and year-to-date, prior-year, and cumulative hours or miles used.
Customize For Your Use	As is true throughout ARM, you can customize the screens within Equipment Maintenance, renaming fields for your specific use, hiding fields, or even adding new fields. (Note: requires the MAS 90® or MAS 200® Customizer module)
View Summary or Detail Information	View summarized statistics for an item, as well as data for each individual serial numbered item.
Serial Item on Repair Listing	The Serial Item on Repair Listing reports all serialized items with the current status of on repair. You may select a specific warehouse, item number and serial number, or choose a range for each.
Serial Item Return-to-Stock Entry	The Serial Item Return-to-Stock Entry allows you to change the repair status for items that were flagged for repair and are ready to be returned to stock.
Item Attachments	Attach any type of file to an item record to store pertinent data such as cleaning instructions, warranty certificates, user guides, and more.
User Defined Fields	Create and maintain an unlimited number of user defined fields to store item-specific information, such as engine horsepower, fuel capacity, date of last oil change, etc.

Blytheco - The Premier Sage Software Business Solutions Provider ◦ National Presence, Local Touch ◦ 1.800.425.9843 ◦ www.blytheco.com

Headquartered in San Antonio, Texas, our firm has specialized in the rental industry and accounting software products since 1986.
