## The Applianz System for MAS 500

Introducing the World's first plug-and-play Financial Accounting system solution, with one of the world's best financial accounting software applications already built-in: The Applianz System for MAS 500 from Applianz Technologies, Inc.

## What is The Applianz System for MAS 500?

This is an all-inclusive total solution, combining the power of MAS 500 preinstalled on a highly reliable network server for both existing customer upgrades and new prospects. With the MAS 500 system, you can have all the power and flexibility of MAS 500 installed and running in minutes instead of days. The system arrives preinstalled with the correct operating system, user licenses, and MAS 500 software. The systems plug-and-play technology removes any potential complexities of integrating MAS 500 into other servers or desktop PC's. This unique system allows authorized MAS 500 users to get running immediately through any existing PC or Laptop without any installation, compatibility, or maintenance hassles.

## The MAS 500 Applianz Scenario

First, decide how many MAS 500 users you will have at the same time. The base system handles 10 concurrent users from any number of local or remote locations; each expansion system adds 10 users. Customers order the appropriate system from their approved MAS 500 reseller. Simply plug the device into your network and it will assign itself an available IP address. Give your authorized users the web page address provided to you to connect to the system. When each user connects to the page and enters their ID and password for the first time, their PC is automatically configured to connect to their new MAS 500 Applianz within 60 seconds. The total setup time for 20 users is 25 minutes!

## Choose the Applianz Solution to:

- Simplify MAS 500 as an even more cost effective accounting/inventory management solution.
- Allow authorized users to access MAS 500 over the Internet from any remote location.
- Avoid the expensive labor time of installing custom built servers.
- Automate ongoing MAS 500 software updates and improve remote technical support.

## Key Features

- Allows users with any PC or laptop running Windows 98 or above to use MAS 500 at its full performance, regardless of the performance of their PCs.
- Runs only MAS 500 and it does it perfectly day in and day out regardless of what else is happening to the user's PC.
- Provides an implementation of MAS 500 that offers many of the benefits but does not suffer from the normal support issues associated with Microsoft Terminal Server or Citrix Metaframe.
- Your system will run for years with no user intervention other than data backup.

## Why Applianz?

**best  
software**

**Authorized Partner**

Using solutions from Applianz Technologies, Inc. dramatically reduces the time and cost of installation, avoiding expensive labor charges and interruption of important work schedules. The product dramatically reduces the overall cost of ownership versus other solutions. MAS 500 users are now able to get instant plug-and-play availability, greatly enhance performance, remote access and improved reliability, all at a lower cost.
