insights for the life of your business™

When you choose the MAS 90 and MAS 200 family of integrated accounting, distribution and manufacturing software products, you don't have to compromise on the way your accounting system works. Whatever your industry or size, there's a MAS 90 or MAS 200 product that is a good fit for your company, with systems that can be tailored to match your internal workflow and business process. Today's MAS 90 and MAS 200 family of products are adaptable to new technologies and used by more businesses than any other product suite in its range. An easy-to-use graphical interface and presentation-quality reporting give MAS 90 and MAS 200 the practical benefits you need. The product family is designed to improve productivity and provide simplified and streamlined navigation, customization capabilities and integration with other desktop applications such as Microsoft Word and Excel software.

Regardless of your company's size or industry, we have a no-compromise solution for you. MAS 90 offers a powerful, easy-to-use graphical accounting solution, and MAS 200 for Client/ Server, and Client/Server for SQL Server, delivers superior client/server performance and remote access compatibilities. Choose MAS 90 or MAS 200 for a tightly integrated accounting and business management system that can help maximize your company's productivity and profitability.

MAS 200

Are you seeking peak performance accounting for your Windows NT network? Then MAS 200 is for you if your larger, growing company has high transaction volume, wide area network (WAN) requirements or needs an Internet-ready solution.

THIN-CLIENT ARCHITECTURE

MAS 200 takes advantage of the very latest Internet- and intranet-compatible thin-client architecture via TCP/IP connectivity. This architecture delivers top performance in WAN and remote access environments, making MAS 200 ideal for multi-site businesses.

MAS 90 and MAS 200 Ease of Use

The Launcher gives you a choice of using the Explorer-like tree view or the drop-down menus to find sub-menus and tasks. The Visual Explorer custom pop-up menu can be accessed anytime by using a right click of the mouse.

CHOICE OF DATABASE PLATFORM

MAS 200 is available on either a Microsoft SQL Server relational database platform, or a high performance b-tree file system.

PERFORMANCE

The client/server engine can provide peak performance even when your company has high transaction-processing demands or a large number of accounting users.

ENHANCED DATA INTEGRITY

A critical benefit of thin client/server architecture is the reduction in network traffic. Lower traffic can increase reliability and data integrity systemwide.

Industry-Leading Reporting Tools, Built Right In

Crystal Reports software is included with the MAS 90 and MAS 200 Library Master modules. With Crystal Reports, you can send your customers presentation-quality invoices, checks, quotations, sales orders and statements. Use your choice of graphics, fonts, text colors, borders and shadings. Access template reports directly from a custom reports menu in each MAS 90 or MAS 200 module.

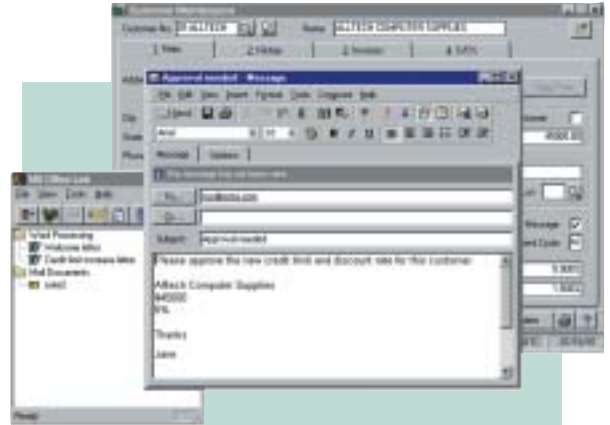

Professional Looking Forms

From borders and bitmaps to colors and shading, Crystal Reports can make your company look good every time a customer receives an invoice, check, sales order or statement.

Microsoft FRx Desktop software is included with the MAS 200 General Ledger module. With FRx, you can create highly refined financial reports. You can print the reports, export them to an Excel worksheet or distribute them to non-accounting system users, who can view them using the DrillDown Viewer.

Custom Office

When you add the Custom Office module (included with systems of 5 users or more), MAS 90 or MAS 200 and your Microsoft Office applications will seem like they're all part of one mission-critical business software suite. Custom Office seamlessly links the application data with Word, Excel or e-mail software. Directly from the customer record screen you are viewing in Accounts Receivable, you can send a welcome letter to a new customer, or e-mail your supervisor for credit approval with one mouse click. Using the Custom Office module, you can add new custom fields to a form, or change any application screen to match your business process, without programming skills. You can speed data entry and improve data accuracy by hiding unused fields, specifying default values and changing tab sequences. You can easily prepare mass mailings to your customers — a wizard walks you through selecting your data and performing a streamlined mail merge.

Customize Your Communications

With the Custom Office module, you can e-mail a supervisor to increase a customer's credit limit, then customize a standard Word template and send a letter about the limit increase to the customer.

Functional Depth

With its broad-ranging series of modules and industry-specific add-ons, the MAS 90 and MAS 200 product line possesses the functionality that medium-sized businesses need to achieve a competitive edge. The product line addresses an ever-widening range of business needs, and represents the right accounting software choice for an increasing number of companies of varying sizes. The following suites of modules are available:

GENERAL ACCOUNTING APPLICATIONS

General Ledger with FRx Desktop
Accounts Payable
Accounts Receivable
Bank Reconciliation
Payroll
TimeCard
FAS Fixed Asset Systems
MAS 90 Abra HR

BUSINESS PRODUCTIVITY APPLICATIONS

Strength Through Global Access

With Internet e-commerce capabilities fast becoming imperative for companies seeking to maintain a worldwide competitive advantage, MAS 90 and MAS 200's e-Business Manager module can allow your customers to log in through the Internet and securely place an order directly into your MAS 90 or MAS 200 system; 7 days a week, 24 hours a day. The e-Business Manager module can provide you with numerous benefits, including:

- **Ease of implementation** – Designed to be implemented without requiring expensive Web or network consultants, e-Business manager is simple to set up and can even be installed in a remotely hosted environment.
- **Three applets** – The capabilities consist of a core e-Business Manager system module and three applets: .inquiry, .order and .store. The customer inquiry applet enables account and order inquiry capabilities; .order is a shopping cart applet with business-to-business order entry functionality; and .store allows you to sell your products and services, to anonymous customers in a secure Web environment.
- **Security** – Only authorized users can access your application data, while allowing your customers to securely access the data they need.

Conduct Business over the Web

MAS 90 or MAS 200 and the e-Business Manager module can supply an out-of-the-box solution to transact business-to-business e-commerce, worldwide, over the Internet.
