

## Sage Account Updater

### Save time and reduce costs

#### Benefits

- Maintain accurate credit card information on file
- Reduce the costs associated with manually updating customer accounts
- Minimize the number of authorization declines

Do you take payments from your customers using a credit card stored on file? If you do, you know the challenge of keeping this information up to date as numbers and expiration dates change. Sage Account Updater helps businesses and organizations that accept a lot of recurring payment by credit card maintain accurate card information on file.

#### Accurate billing information

Credit card details can change for many different reasons including regular updates to a credit card's expiration date. Other reasons include a new card number issued due to identity theft, upgrades, chargebacks, or a closed account. How do you keep your records updated with these changes to make sure you are billing properly? Sage Account Updater is the answer.

#### Automatic updates

Each month Sage Account Updater checks Visa and MasterCard credit cards set up as a recurring payment in a Sage Virtual Terminal for changes to the credit card data. This card data is updated as necessary to help keep your credit card billing information current. This will ensure you are collecting payments on time and eliminate the hassle of manual updates.

#### Save time

Autoupdates of credit card numbers and expiration dates saves you time and money by minimizing the need to request your customers update their billing information.
