

How Does Accounts Payable Process Automation Work?

ACOM's AP Process Automation Solutions use Readsoft's OCR engine, the industry's top technology for Intelligent Data Capture (IDC). IDC is an advanced technology that's causing a fundamental shift in the way businesses read and process paper and electronic documents.

What you get is faster processing, lower headcount, timely and accurate information; not to mention the positive impact on your bottom line. Here's how your organization benefits:

Manual Keying Is Eliminated, Reducing Administrative Costs and Error Rates

Any incoming invoice is automatically captured and sorted by buyer, supplier, country, and invoice type. Relevant information is then extracted, classified and intelligently launched through direct processing, workflow and approval routing and secure archival.

Automate and control the unmanaged data and processes you need to run your business making data entry faster, less expensive and more accurate.

Automated ERP Synchronization with Write-through to GL with Sage ERP systems

Take AP Automation to new levels and complete AP Transactions automatically, with write-through to General Ledger from a completed workflow approval.

Manual data imports or exports are eliminated!

Direct access from your Sage screens for better answers, faster business processes and more satisfied customers

Put an end to inconvenient & unnecessary toggling between ERP and business application screens with instant access to AP, financial and any related documents... directly from your Sage ERP screens.

Create a productivity jolt for customer service with immediate answers and faster processing.

SOX and Regulatory Compliance-Ready

A complete audit trail keeps track of what has happened to the invoices and supporting documents at every step of the process, (who did what and when, and any steps pending). EZCM's system policy-based Records Retention helps organizations comply with the requirements, restrictions and guidelines of financial legislation such as Sarbanes Oxley and FASB standards.

And complete visibility delivers new levels of efficiency and improved cost control.

AP Processing an Integral Part of your Enterprise-Wide Content Management System

ACOM's EZContentManager (EZCM) is an intelligent Enterprise Content Management solution, enabling companies to automate the paper intensive processes in accounting & finance, administration, human resources and in every department.

Track modifications to financial and supporting business-critical documents, when they were made and by whom. Audit-ready, as the system maintains documents always in their proper version... readily available through ERP or throughout the enterprise.

Consolidate all of your organization's core document-centric information into one place, transforming all of your paper into manageable, electronic information for immediate access and with centralized visibility.

Manage who has access to what information, what they can do with it and how fast.

The boost in efficiency and productivity makes ROI a rapid reality for any organization.
