

IT'S TIME TO UPGRADE TO 4.2!

Sage MAS 90 and MAS 200 Version 4.2 is packed with tools and features that help professionals across your business—from the executive suite to accounting to operations—work smarter and more efficiently.

Blytheco recommends that our clients upgrade to this latest version. After extensive testing and many client installations, our experts are very pleased with the performance and stability of Version 4.2, and our clients are raving about the sophisticated new features!

Why Upgrade?

- As of December 1, 2007, Sage Software will not provide any more year-end Accounts Payable, Payroll, Magnetic Media or Tax Table Updates for version 3.71.
- As of December 1, 2008, Sage Software will no longer provide any telephone or email technical support for version 3.71.
- Microsoft Vista is now supported by Version 4.20.
- Version 4.20 introduces several new available modules, including integrated Fixed Assets, Business Insights Explorer, and SageCRM.

A few of the key enhancements in 4.2 are:

- **New Business Insights Explorer** – The new Business Insights Explorer serves up data from across your organization, turning it into rich business intelligence that supports decisions. Drill down into transaction-level details. Perform instant “what-if” analyses. Filter information so you get exactly what you need—without the clutter.
- **Extensive AP customer-requested improvements** – In a recent customer survey, customers said they wanted to be able to capture more detailed information by passing invoice comments on to the check register, and alpha-numeric check numbering. Version 4.2 gives you the functionality you’ve been asking for, and much more!
- **Built-in CRM integration** – Improve customer loyalty and sales with an enhanced integration to any three CRM solutions from Sage Software—SageCRM, Sage SalesLogix, or ACT! by Sage.
- **Advanced personalization features** – The new Sage MAS 90 and MAS 200 allows each user to make modifications based on personal preferences, without programming knowledge.

Consider This...

We strongly recommend that our clients engage with Blytheco, LLC to perform upgrade-related services. Blytheco, LLC experts have thoroughly tested the 4.2 conversion process and are aware of the system changes and upgrade procedures; our comprehensive upgrade planning process will ensure that your system is upgraded efficiently, with minimal downtime, so that you may begin putting the significant new features of the 4.2 to work in your business immediately!
